THIRD PARTY INSPECTION AND TESTING SERVICES

“National Centre for NDT – Islamabad, provides third-party inspection and testing services to industries and other organizations to improve their product's lifespans from the very beginning to the end of service.”

Although, many organizations and industries contains their own NDE teams for in-house inspection; a fleet of expert manpower and hi-tech equipment for state of the art job of inspection and testing is not feasible for each company. Also, the local inspection teams ignore many pre-requisites and detailed inspection requirements which could lead to the non-conformance of equipment and may results in unaffordable damages.

The support of a third-party NDT team can be an ideal way to ensure that inspection needs are met without overextending the organization resources.

SERVICES OFFERED
